## Games not played

Posted by jcarnley - 2008/07/15 19:39

---

I don't know if anyone has ever thought about this but having a folder which would show you all the games in which you have not set a high score. It would be enable players to quickly find any games they haven't played in order to increase their ranking. I know when you are close to having played all the games on a site it is hard to find the couple you have not played.

Hi,  
I have this option on my old site with joomlaflashgames.  
you will find below the code:

```
function opengames() {
global $database, $my;
echo"Liste des jeux auxquels vous n'avez pas encore sauvegardé de score

";
// $database->setQuery( "SELECT * FROM #__joomlaflashgames WHERE id NOT IN ( SELECT gid FROM
jos_joomlaflashgames_scores WHERE uname='$my->id' ) and scoring_structure '0' and published='1' order by title" )
$database->setQuery( "SELECT * FROM #__joomlaflashgames WHERE id NOT IN ( SELECT gid FROM
#__joomlaflashgames_scores WHERE uname='$my->id' ) and scoring_structure '0' and published='1' order by title" );
$wtscores = $database->loadObjectList();
foreach ($wtscores as $wtscore) {
?>

">
" border="0" height="50" width="50">
">
```

and i have a link ( [index.php?option=com\\_joomlaflashgames&task=opengames](index.php?option=com_joomlaflashgames&task=opengames) ) in "user menu" to see this function.

I hope it will be help you.;

Good Idea.

I was modify upper code for PuArcade and I post it for You ;) .

To function WriteGamesTable in cls.puarcade.php file add:

```
}elseif ($fid == 9990) {
    $query = "SELECT
id,numplayed,description,imagename,published,gamename,title,reverse_score,scoring>window,height,width,contentratingi
d,folderid FROM #__puarcade_games WHERE id NOT IN ( SELECT gameid FROM #__puarcade WHERE userid='$my-
>id' ) and scoring '0' and published='1' order by title ASC ".$limit;
```

To function ShowGames in puarcade.html.php file add:

```
elseif($fid == 9990){
    $pageheading = "Games without Your scores";
}
```

To function processShowGameSelections in class.puarcade.php file add:

```
} elseif ($fid == 9990){
    if ($showpathway==1){
        echo " ";
        echo stripslashes($title)." ";
        echo "Games without Your scores";
        echo "";
    }

    $query = "SELECT count(*) from #__puarcade_games WHERE id NOT IN ( SELECT gameid FROM #__puarcade
WHERE userid='$my->id' ) and scoring '0' and published='1'";
    $database->setQuery( $query );
    $count = $database->loadRow();

    include_once( "includes/pageNavigation.php" );
    $pageNav = new mosPageNav( $count, $limitstart, $limit );
    puarcade_html::WriteSpecialFolderLinks($Itemid);
    puarcade_html::ShowGames($Itemid,$pageNav,$flat,$fid);
```

and link for this You can add where You wish :laugh:

```
echo "Show Games where You have not Your scores";
```

has this been tested in the svn 346? I added it but it doesn't work at all.

---

I have installed SVN 338, but very modified.

What did it? Something, nothing or blank screen?

=====

## Re:Games not played

so if I do a search for FID9997; I see roughly the same code that you're using, if I duplicate this function exactly but change the fid number to say 9995 and change the db query string, it doesn't work? Does the popular link have additional code that is needed for it to function?

If I change the db query string for 9997 it works great as an "unpopular games" link but I'd rather duplicate it not replace it.

I so wish I knew php coding well :)

Thanks for these ideas. When I get some time I'll try to make this a CB tab. I think that is the best place to put personalized info for my site and probably others. Thanks again for the code I could have never figured out.
