
Subscriber SVN download updated to rev 380.

Posted by pragma - 2008/10/02 11:58

I've just posted an updated SVN installer to the subscriber downloads area. This version adds contests back in, along with a number of contest related bugfixes.

Check it out!

Yes I set up a halloween contest!
when scores are saved it says a new score is saved to contest, but I can't see where...
It's gona be huge Pragma thanks!

btw regarding svn

It looses template selection even a default one, always going back to ocean... my fav is night

Anyway to keep the plugins when uninstalling?

Java scripted date selection for Calendars not working . So start and end dates can't be choosen via a calendar popup.Dates in the front end are still wrong also but correct in the backend.

Here's the error

syntax error

```
submitform("addcontest")joomla.javascript... (line 352)
```

```
submitbutton("addcontest")joomla.javascript... (line 343)
```

```
return showCalendar(
```

Re:Subscriber SVN download updated to rev 380.

I could use the javascript calendar just as it should with no problem and no error, very easy actually, only as said Tinker , the date is ok in the backend but wrong in the frdnt end (testing on j1.5)

edit:

sorry it works on front end here:

`index.php?option=com_puarcade&arcade=contestdetail&contestid=3`

but doesn't work here:

`index.php?option=com_puarcade&arcade=contest`
