
Uddeim fatal error

Posted by aisuru - 2008/10/03 01:26

I just tried to install Pu arcade on my joomla 1.5.7 it installed perfectly fine but when i try to go to it i get

http://www.aisuru.org/community/index.php?option=com_puarcade

is this because puarcade still isn't compatible as yet?

Can this be fixed? I don't want to disbale my message component:unsure:

PUArcade version?

Joomla version?

Other components you are using?

SEF?

SMF?

Legacy mode enabled?

PUArcade version: Puarcade 2.3

Joomla version: 1.5.7

Other components you are using: the only one it says its having problems I think is Uddeim its a messaging system

- seyret
- communninty builder
- MH2treasury
- firbaord
- Jomcomment
- Joomgallery
- hwdvideoshare
- Phocagallery
- recommend

Legacy mode enabled: yes legacy mode is on

Linux gator143.hostgator.com 2.6.26.5-grsec #32 SMP Wed Sep 24 03:14:00 CDT 2008 i686

Php: 5.2.6

Install PUArcade version: 2.3

Current PHP version: 5.2.6

Database version: 5.0.51a-community

Webserver to PHP interface: cgi

PHP Safe Mode: FALSE

Joomla version: 1.5.x

/newscore.php has the correct permissions

/arcade.php has the correct permissions

I don't see any errors on that page. What is the error message you are getting?

=====

Re:Uddeim fatal error

Posted by JamesB - 2008/10/05 10:16

Is it when you save a score you are getting a message?

Can you capture the message you get?

I doubt this is an arcade issue, more likely the 3rd party plugin.

At the same time, can you let us know the version of uddeim you are using.

Regards,
James.
