## text front of system rating

Posted by adonis - 2008/09/21 08:00

---

Hi,  
can you help me please to add a text ( example: "vote for this game" ) front of the system rating.  
I found the part of code in puarcade.html.php but i don't know how to do.

Hi,  
Can you let me know what you are trying to achieve?

Regards,  
James.

Is it possible to add a text like the photo: [http://www.pragmaticutopia.com/images/fbfiles/images/Sans\\_titre\\_1.jpg](http://www.pragmaticutopia.com/images/fbfiles/images/Sans_titre_1.jpg)  
thanks James

Open puarcade.html.php. Search for "Write Rater", around line 112.  
Put this at line 118, so it is between the two lines that start with script type=...:

Vote for this game:

It may show up on a different line, I'm not sure. Let us know how it goes.

OT:

I have added text with rating after score save, peoples voting more, but this feature is for Highcore games only.

Would it be possible to put all of this on the same line so it said:

Vote for this game: \*\*\*\*\*

?

It is certainly possible. That might even be how the code above displays...I've never tried it. I'm waiting for someone to come back and tell me how it looks, then we can tweak it.

Well, it looks like:

Vote for this game:

\*\*\*\*\*

that works when i put the text in front of the script but it's not on the same line with the rating system.

Any idea on how to get the text/stars on one line, Pragma?

I fixed this by changing the width of the rating class in my template css file. Since all of that script stuff falls within the div with this class, leaving it at 100 means there is no room for extra text. I'm using the Ocean template and increased the width from 180px to 200x

So, in file com\_puarcade\templates\ocean\style.css, around line 272 in the .rating class I changed

```
width:100px;
```

to

```
width:180px;
```

You can change this to what ever you want to position this where you like on the top line.

As well, in puarcade.html.php, I added the following code to the front of line 119:

Rate this Game:
