
PU Item Stats 1.0 + Joomla 1.5

Posted by Eldegast - 2007/08/06 09:46

I recently installed Joomla 1.5 RC1 or anyway the newest Joomla version available last week. I installed puitemstats just now a moment ago and I wasn't really expecting it to work out of the box since I'm fairly sure it was made for Joomla 1.0x. Anyway has anyone gotten it to work or should I just forget about it and build my own hack for getting some itemstats working with joomla 1.5 ?

Problem is that on my frontpage it pushes out on the iframe:

```
registerFunction( 'onPrepareContent', 'bot_itemstats' ); include_once("bot_puitemstats.php"« »); function bot_itemstats( $published, &$row, &$params, $page=0 ) { // simple performance check to determine whether bot should process further if ( strpos( $row->text, " ) === false ) { return true; } // if bot isn't published, lets just strip out the item tags if (!$published) { $regex = "###s"; $row->text = preg_replace($regex, "", $row->text ); $regex = "###s"; $row->text = preg_replace($regex, "", $row->text ); return true; } else { $row->text = $GLOBALS->lookup($row->text); return true; } } ?>
```

Anyway any helps or tips would be appreciated.

Well, this will give me an excuse to try out Joomla 1.5 ... ;)

I'll take a look at getting it working in 1.5 sometime this week.

Any update on this ? :)

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by Korrigan - 2007/08/17 01:12

Man, sorry, I forgot about this. I haven't even downloaded Joomla 1.5 yet...

I got Lord of the Rings Online for my birthday and once I figured out that it's playable on dial-up... Well, I'm hooked.

Been playing it for nine days and between work and the game I've been averaging 4 hours of sleep a night. :blush:

I'll really try to look into it this weekend.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by Eldegast - 2007/10/22 03:47

Hi, I guess no update on this ? :)

I can live without but Joomla 1.5 is going into RC3 or RC4 now so I guess there will be a stable release fairly soon.

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by pragma - 2007/10/22 08:06

I will probably update it to support Joomla 1.5 after there is a stable release.

Posted by hejman - 2008/02/20 09:33

Sorry for bumping such an old thread.

I just wanted to say that i'm very much looking forward to an update, as upgrading to 1.5 have made my PUItemStats not work, rendering several of my modules unable to work functionally.

Would it be possible to expect an update soon?

It would be very much appreciated, eventually, if it could pull itemstats and links from WoWHead i think you would satisfy a whole bunch :)

Thanks in advance!
Hejman.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by Pzibian - 2008/02/20 15:12

I gave up trying to get itemstats working with joomla 1.5, but there is a much easier way to get popups from wow to work in joomla

Just put the following code into your template index.php file

now just edit the article u want to show the item popup and type in the item you want to link for example

highlight this text and make it point to the url <http://www.wowhead.com/?item=19019> in wowhead and it works. then just colour the text manually same as the item.

Has same effect as itemstats but a lot easier.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by hejman - 2008/02/21 01:05

Pzibian wrote:

Has same effect as itemstats but a lot easier.

Not true, itemstats automaticly looks up the stats of the item embeded in

This makes it possible for a script to list loot embeded by the item clamps ect.

Please, developers.

Give us an updated version working with Joomla 1.5, hopefully able to link the item to wowhead with a wowhead styled tooltip also :)

Thanks in advance.

You just made my whole day :woohoo: :woohoo:

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by pragma - 2008/03/04 10:04

Ok, I have created a new version of PU Item Stats that works with Joomla 1.5, but it seems that wow.allakhazam.com is down, so it is hard to test...

Can anyone else get to wow.allakhazam.com?

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by pragma - 2008/03/04 10:13

Anyway, I've posted the updated plugin.

In the downloads area, you'll now see one download for Joomla 1.0.x and one for Joomla 1.5+.

Like I said, I can't test it because wow.allakhazam.com seems to be down, but I think it will work. Please post here if it doesn't.

Fatal error: Call to a member function on a non-object in
/web/htdocs/www.voidguild.eu/home/plugins/content/itemstats/itemstats.php on line 47

And how does it behave? Like, does it work at all? Does it always give that error? Does it say anything else?

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by shoeben - 2008/03/05 06:51

its a bit hard to explain but ill try...

Sometimes the page works and then i see the error (on the bottom of my website since i have the debug on) but most of the time my website doesnt work at alland it says..website cannot be opened..

When i remove my command Softstep Boots of Tracking the whole website works again perfectly.

So basicly when i start useing bbcode this pops up.

my website is <http://www.voidguild.eu>

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by cerberos - 2008/03/07 01:04

Hello Pragma,

Is there any hope make this plugin works with wowhead instead ??

<http://www.wowhead.com/?powered>

Hope you can do the trick, is better better better resource for itemstats :)

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by shoeben - 2008/03/07 03:04

OK the error i fixed myself atm so thats gone now the question about modules remain.

Im using the module Latest_Loot. This module pulls the 5 latest loot from my EQDKP db and shows them on the main page.
the problem remains that in this module it still shows .

If you take the source of my side you see the following

Test Loot

Gloves of the Forgotten Vanquisher
Feelman 05.03.2008

Helm of the Forgotten Protector
Bunf 05.03.2008

Cuffs of Devastation
Tricker 05.03.2008

Blessed Adamantite Bracers
Voynix 05.03.2008

Pillar of Ferocity
Pvpdruid 05.03.2008

This is the result of the php page in wich the overlib is beeing loaded and the style sheet but for some reason it doesnt work...any clue on what im doing wrong ?

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by Chearaa - 2008/03/11 09:14

Hi Pragma...

I've just a problem with your plugin for Joomla 1.5

I installed itemstats from itemstats.free.fr - the core version - and joomla 1.5 on a localhost test server.

Also there aren't any errors at the installation of your pu_itemstats plugin for Joomla 1.5.

But at the news, there are these errors if i try to test the -tags:

Fatal error: Call to a member function getcfg() on a non-object in ***\puitemstats.php on line 45

I've tried to fix it with

```
$item_stats->host = "localhost"; //$mainframe->getcfg('host');  
$item_stats->user = "****"; //$mainframe->getcfg('user');  
$item_stats->password = "****"; //$mainframe->getcfg('password');  
$item_stats->db = "****"; //$mainframe->getcfg('db');
```

but then the next error is

Fatal error: Call to undefined method ItemStats::BuildCache() in ***\puitemstats.php on line 49

I can't find this class "BuildCache" to try to fix this problem.

Please help :)

Thx
Chearaa

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by jare - 2008/03/14 02:13

i am having the same problem as Chearaa. Would be so grateful i you could help me fix it.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by pragma - 2008/03/14 09:19

So what is the question, exactly?

Did you replace the itemstats install that comes with PU_ItemStats? If so, it won't work. The itemstats that comes inside PU_ItemStats is heavily modified to work as a plugin.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by jare - 2008/03/14 09:25

I haven't replaced anything, the error only occurs whe i use the bbcode. e.g. Cenarion Helm

Fatal error: Call to a member function getcfg() on a non-object in ***\puitemstats.php on line 45

thats the error im getting

Yep, it doesnt work in modules. Any solution?

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by cerberos - 2008/03/14 15:36

Hello again,

I will sum up the 2 problems i have seen till now and one feature suggestion :)

1)

It doesnt work inside modules in Joomla 1.5. In the content it works (not fully, see below for info) but in the modules, nope.

2)

The 2nd problem, to me at least, is the following.

My webpage is: <http://www.mysamurai.eu/v6/>

If i have one content article in the page that use the item code, everything is ok.

For example see my page and you will see that i have one latest article on the homepage.

A picture example: http://www.mysamurai.eu/xamples/xamples_PUT_1.jpg

If i enable a 2nd article to be shown in my webpage, the error (thats its the same error ppl above posted) is the following:
http://www.mysamurai.eu/xamples/xamples_PUT_2.jpg

So when only one content article that have the item code is on the same page all works and when a 2nd one is posted, it doesnt. As you can see also in the picture, it doesnt load the css file on the 2nd one and have the error in the down side of the picture.

Now to be sure that is not a template problem, i deactivated the plugin and put 2 articles on the same page as before.

The result:

http://www.mysamurai.eu/xamples/xamples_PUT_3.jpg

As u can see, they display ok (with the css of the page ok) but without the itemstats look, as i have deactivated the plugin.

So clearly, its a problem of the plugin. Hope you can solve it somehow.

Now as for the suggestion, i really hope it can display as a source, the wowhead in all the items. Maybe have an option in the plugin that users choose where they want to have their itemstats source? Just an idea.

Ty again for all your hard work, just trying to make it better :)

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/07 02:17

Hi,

I came across this thread while trying to build a new site for my guild.

First of all a big thanks to Pragma for his initial work. He's no longer playing wow so him even giving any time to this project is pure kindness.

I'm currently working on 'fixing' this plugin for 1.5 and also converting it to use Wowhead. I am using eqdkp, latest_loot and other such mods so hopefully I'll be able to deal with most of the problems that people are having such as:

"Fatal error: Call to a member function on a non-object in /home/content/m/y/s/mysite/html/itemstats/itemstats.php on line 47"

I'm getting to the bottom of it but I have some other stuff to do right now of more importance. When I've completed the work I'll post my results here.

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/07 16:26

Just to confirm I have successfully updated this mod to use Joomla 1.5 and wowhead. I have also updated Latest Loot to work with it, 1.5 and wowhead. I have also updated Boss Progress to use these wowhead style of tooltips.

I had some rather frustrating caching issues that threw me for a while but got passed them eventually.

It's late now so I'll put it all together into a zip file tomorrow and test it properly. The changes to the other 2 are just hacks and I'll post the code changes directly on this site.

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by pragma - 2008/06/09 13:11

Thanks sirhara, we'd love to see an update.

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/10 03:19

Here it is, a little longer than I had hoped ;)

The new version (2.0) is pure Wowhead, I have cleared out all the other versions of support so be aware of that before you download. I have moved most configurable options from the raw code into the Joomla plugin params section so you can set it up through Joomla after install.

I added support for the eqdkp DB being in a different DB to joomla (since mod_latest_loot does).

Fixed a few small bugs in the generation of tooltips and a bit of general housekeeping.

PUItemstats-2.0

===== mod_latest_loot hack =====

I needed the following hack to make latest_loot work with my shiny wowhead itemstats. I've basically updated part of it to support joomla 1.5 properly. I'm not fluent with Joomla so I haven't bothered doing it fully, but this works for now:

mod_latest_loot.php:

Find the following section towards the end:

```
global $_MAMBOTS;
$row = new txt();
$row->text = $output;
$_MAMBOTS->loadBotGroup( 'content' );
$params =& new mosParameters( " );
$results = $_MAMBOTS->trigger( 'onPrepareContent', array( &$row, &$params, 0 ), true );
```

Replace it with this:

```
global $mainframe;
$row = new txt();
$row->text = $output;
$dispatcher =& JDispatcher::getInstance();
$params =& $mainframe->getParams('com_content');
JPluginHelper::importPlugin('content');
$results = $dispatcher->trigger('onPrepareContent', array ( &$row, &$params, 0));
$output = $row->text;
```

This is quite rushed so if you find any errors please post back here and I'll answer them. If it looks good then maybe make it your official link to stop people bugging you? :)

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/10 03:26

One other point, I had some problems with cached pages (even with caching disabled).

If you turn on the mod and find it doesn't work, try rewriting your page with new content (different items) as a test.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by feil75 - 2008/06/10 03:29

Thank you, thank you, thank you.
Will try it tonight.

Now, how about integration with Fireboard? :)

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by threexone - 2008/06/10 04:18

Thank you sirhara for your work.

I tried to install the plugin but I came across this error :

JInstaller::install: Le fichier '/home/ice/public_html/site2/tmp/install_484e5252765f1/itemstats/index.html' n'existe pas

It seems that the "itemstats" folder in the archive is empty. I unzip the archive and I can confirm that.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/10 15:21

wow I really suck. :(

New zip uploaded, try the above link again and let me know.

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by threexone - 2008/06/11 02:19

The new zip installed like a charm.

However I still have a problem, but it's probably on my side. When I try to use it, this error comes :

Fatal error: Call to undefined method ItemStats::BuildCache() in
/home/ice/public_html/site2/plugins/content/puitemstats.php on line 64

If I comment the line n°64, I get a message saying :

Erreur de chargement des modules :MySQL server has gone away SQL=SELECT id,
title, module, position, content, showtitle, control, params FROM jos_modules AS m
LEFT JOIN jos_modules_menu AS mm ON mm.moduleid = m.id WHERE m.published = 1
AND m.access

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/11 08:46

Hmmm that's rather odd...

This is the area of the file we are talking about:

puitemstats.php:

```
62: require_once("itemstats/itemstats.php");
63: $item_stats = new ItemStats($host, $user, $pass, $db);
64: $item_stats->BuildCache();
```

itemstats/itemstats.php:

```
// The main interface to the ItemStats module.
class ItemStats
{
    var $item_cache;
    var $info_site;
    var $db;
    var $host;
    var $user;
    var $password;

    // Constructor
    function ItemStats($host, $user, $password, $db)
    {
        $this->host = $host;
        $this->user = $user;
        $this->password = $password;
        $this->db = $db;
        $this->info_site = new InfoSite();

        // Setup a ghetto destructor.
        register_shutdown_function(array(&$this, '_ItemStats'));
    }

    function BuildCache()
    {
        define('dbhost', $this->host);
        define('dbname', $this->db);
        define('dbuser', $this->user);
        define('dbpass', $this->password);
        define('item_cache_table', 'item_cache');
        $this->item_cache = new ItemCache();
    }
    .
    .
    .
}
```

If it survives lines 62 and 63 which is including and creating an instance of the class using the constructor I'm stunned that it can't find the BuildCache() function. Are you sure your versions of these files look the same as my code here?

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by threexone - 2008/06/11 09:40

I have re uploaded the files puitemstats.php and itemstats.php. And now it's working. It's really strange because the code in the files were exactly the same.

Thank you so much sirhara.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/12 02:41

I seem to get similar problems with other joomla mods - errors reported then you go away for a while, come back then everything works... Strange.

Enjoy the plugin and please bump anyone else who has tried this and it works so I can get more confirmation. Thanks.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by feil75 - 2008/06/12 12:20

Just installed it and I have 2 problems. First, when I put an item link i get the following: Failed to update item: Sun Touched Satchel (Column count doesn't match value count at row 1)
I guess this has to do with the item_cache table? I don't have it in the DB, even after uninstall/reinstall.

2nd issue, I get the following error in the website log:

PHP Notice: Undefined variable: DEBUG in /var/www/prophecy/html/plugins/content/itemstats/includes/sqlhelper.php on line 65

Note, that I dont have eqdkp installed, just the puitemstats.

Thanks.

OK that debug handling might need changing for joomla 1.5 I'll take a look tomorrow but it's nothing to worry about just annoying.

The first error is suggesting that you DO have the item_cache table but that it's the wrong "shape", i.e. the wrong number of columns, and indeed, it is!!! The fix is fairly trivial and I'll have it for you in the morning (8 hours from now ;)).

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/13 00:18

OK,

I've uploaded a new version use the same link above or here's that same link again:

puitemstats-2.0.zip

However you will still need to run some separate code to fix the problem. The previous version created a broken item_cache table so you need to manually delete it and let the code create a new one for you. So either using some kind of GUI manager such as phpmyadmin or use mysql from a terminal and connect to the database then delete the table. The deletion SQL is:

```
drop table item_cache;
```

Once you have deleted the table, install the updated version of the plugin and hopefully it will work this time.

The bug you have found will exist for anyone who doesn't already have eqdkp installed (which would have created the correct version of the item_cache table).

Posted by feil75 - 2008/06/13 00:43

Great job, works perfectly. Thanks again. :cheer:

Do you have any plans to integrate with Fireboard (v1.0.4)?

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/13 06:39

I'm not using it myself, but If I get some more time I'll take a look at it.

Posted by Thundaballs - 2008/06/13 23:48

Sirhara,

Would like to say thank you for converting this mod over to Wowhead firstly. However I have a small problem. My mouseover is working just fine and all, except that the images or icons for the items are not showing up. It is just showing the box. Do the icons for these items need to be stored locally or remotely? Also, is there a way to check to see where I have it pointed to?

Thanks,
Thunda

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by sirhara - 2008/06/14 01:52

Hmmm,

Are you using eqdkp as well or just itemstats standalone?

It might need to force an update somehow or it might be that it's not configured properly.

Go to your Joomla Administration page. Extensions -> Plugins -> PUItemstats.

Check all the parameters on the right hand side. Specifically if you want to download the icons and store them locally you

need to create the "wowhead_icons" directory (or whatever you want to call it) and make it writeable by the web server. If you are unsure about this you can confirm this is the problem by just turning off local storage for a test.

If this is not your problem let me know and I'll see if there's something I need to change.

Right now I'm just using Itemstats alone, however I am uploading EQDKP-plus atm. So, when I get that uploaded and running lets hope it fixes itself out.

Edit (2): First edit was due to me leaving words out of my sentences, thinking faster than you can type for the lose. Anyhow, installed EQDKP-plus, and everything is working great now =). Oddly enough in a different database and its still working fine without hiccups. Thanks for the awesome module.

Cheers,
Thunda

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by Smash - 2008/06/19 15:50

Thanks for all the help so far guys. I'm still relatively new to all this and I'm having a problem still. I'm running joomla 1.5.3 in legacy mode, I have EQdkp-Plus installed on the same database as Joomla and I've downloaded the puitemstats 2.0 linked in this thread by Sirhara. When I use puitemstats 1.1, the links work perfectly, but there is that annoying error at the bottom of the site "Fatal Error: Call to a member function of a non-object in /home/content/m/y/s/mysite/html/itemstats/itemstats.php on line 47"

When I uninstall puitemstats 1.1 and install puitemstats 2.0 and run it, I'm now getting this error:

string(31) "Unable to connect to SQL host: " Failed to update item: () Failed to update item: () Failed to update item: ()
Failed to update item: () Failed to update item: () Failed to update item: () Failed to update item: () Failed to update item:
() Failed to update item: ()

Please help? :(

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by samiresa - 2008/07/24 16:43

I have been a long time user of Itemstats, but recently I found this lovely plugin and I love it to pieces. I am in the process of reworking my guilds website and have this working..sortof. If I have no links put into my main page, or items in tags, the page works perfectly (even EQDKP latest loot), but if I put a link in the news section the site just hangs there and does not load any of the tooltips.

www.fallenheroesguild.com/Joomla (still work in progress)

Please help, I love this addon and want to continue to use it.

Posted by topmaniac - 2008/07/26 11:33

hello everybody!! I have test youre plg v1.1b and v2.0 for joomla 1.5

But if i use 1.1b i become only a blank page... and idont know how to fix this...

If i use v2.0 i become only a buildcache error.

I have test to fix my problem ... i have read every post but i cant fix this problem...

can someone help me pls??

I hope there come a working plg in the future

Posted by snipes2083 - 2008/10/05 20:50

I know this has not been posted on in a while but i have searched high and low to find a solution. I have joomla 1.5 (current updated) and Fireboard 1.5. Item Stats works great in a regular page but will not work with fire board. I really enjoy the work that you guys have and would like to use it in my forums. Thank you for your help.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by hazz - 2008/10/06 05:45

I've just tried installing PU item stats 2.0

does it need EQDKP to work? or does it work by itself?

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by snipes2083 - 2008/10/06 06:23

Before 2.0 it worked by its self. I am not sure if you have to put in database information with 2.0 or not. Even with database information in I can not see the icon only the extra information that pops up. And it doesnt work with my fireboard 1.5. It just desplays the code as if you were to write it on notepad.

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by hozz - 2008/10/06 08:47

ok, this is a bit off topic but kinda related...

I've had a look at EQDKP but I'm a little unsure about installing it.

From what I can see, unless i'm very mistaken, EQDKP will completely change the look of my website. Is this the case, or is it just a series of DB's that install in the background?

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by snipes2083 - 2008/10/06 10:17

Anybody still following this forum that has been able to get this to work with the current release of FireBoard?

=====

Re:PU Item Stats 1.0 + Joomla 1.5

Posted by snipes2083 - 2008/10/11 08:34

I would really like to have this working in my forums. Has anybody out there figured this one out yet? I only get the some item code in my forum when i try to use the code.
